

1. What are 3 HTML elements not mentioned in any of the video this week? What do they do and how are they used?

HTML has a <blockquote> element that will define a section that is a quote from a different resource. <blockquote cite="URL"> This can be used prior to, just after or in the resource section of the file. A short quotation can be declared using <q> which defines the short quote and HTML will add the quotes as required. An example: <p>I am tall: <q>6'5" to be exact.</q></p>. This will appear: I am tall: "6'5" to be exact." on the website. HTML can also "cite" titles of work using <cite> which will render the title in italic. When used correctly the creator of the work is not italicized only the title will be.

2. What is a highlight of what you have learned this week?

A highlight of what I am learning this week is the idea that I can start to see the greater picture of what it is we are doing in this class. There is still so much to learn, however seeing a direction is helping me understand what we have covered up to this point. Being able to see what I have been creating on the website, even as rudimentary as it is, gives me a feeling of satisfaction for what I have done and what I will be doing.
